Subject: RE: TCE draft final TSCA risk evaluation - For review by Oct. 9, COB
Attachments: TCE Summary of Public and SACC Comments_IAIA draft 10-1-20.docx

Good Morning Everyone,

It is a gentle reminder. The comments are due to me by COB tomorrow.

Some good news with providing little more time. If you are not able to submit your comments by tomorrow, I can accommodate until 10 am on Tuesday (10/13). If there are any show-stopper type comments (i.e., requires to discuss at the IOAA level), please let me know as soon as possible.

It was just brought to my attention about the availability of Response to Comments document prepared by OPPT in response to public and SAAC comments. I am attaching here for convenience. It appears to me that it is not posted in the link from OSAPE below where you would see all the associated documents.

Do not hesitate to reach out to me if you have any questions.

Best,

-Santhini

Subject: TCE draft final TSCA risk evaluation - For review by Oct. 9, COB
Importance: High

Dear TCE RE reviewers,

Thank you for offering to review the final draft TCE TSCA Risk Evaluation. I admit the review period is limited. Hopefully, this can be accomplished by focusing on your specific areas of expertise. It is also helpful to see how these different fields are integrated to make the risk characterization and risk determination conclusions.

Here are the comment instructions.

- We are focused on identifying significant comments and “show-stoppers.” “Show-stoppers” are issues that we will elevate to ORD’s IOAA if not addressed by OPPT.
- Comments should focus on scientific inaccuracies. The structure of comments should include a clear statement of the scientific inaccuracy, how it affects the conclusions presented in the draft final risk evaluation, and a recommendation for how OPPT could address this inaccuracy.
- Do not include editorial comments (e.g., misspellings, capitalization errors, formatting issues).
- Do not include comments in the risk evaluation document. Please provide your comments in the ‘TCE FNL Dft Risk Evaluation Comment Template’ according to individual Section and Line number. This is helpful for me to consolidate comments within CPHEA and for OSAPE to help consolidate the comments across ORD.

Attached are the final draft TCE Risk Evaluation document (the main document for review) along with ‘TCE FNL Dft Risk Evaluation Comment Template’ where you would provide your significant/show-stoppers type comments. Also attached is previous ORD comments document dated Jan 16 ‘20 that was transmitted to OCSPP on the draft version published prior to external peer review. This document helps to ensure to see if our previous comments are addressed. I have attached these documents here for your convenience. The TCE link below provides supplemental files that you may need for specific details.

OSAPE has created a SharePoint TCE folder to accommodate this review. You can access the TCE folder using the following link:

Ex. 6 Personal Privacy (PP)

Note: You may need to be connected to the VPN to access the link. The link to the TCE folder helps you to find the supplemental files.

The TCE folder also includes a folder entitled “**From OCSPP**” containing documents received from OCSPP, as well as a “**TSCA Science Advisory Committee on Chemicals**” folder containing the SACC minutes and final report. Please note:

1. The TCE document list is included for reference. There are 30 documents total.
2. Not included is the Response to Comments document. OCSPP is working to get that distributed by end of the week.
3. Also not uploaded is the PBPK model zip file (file #29). It is 1GB in size and is identical to the published draft version, available via <https://www.epa.gov/assessing-and-managing-chemicals-under-tsca/draft-risk-evaluation-trichloroethylene#files>.
4. The Summary of Progress is included which contains high-level bullets identifying “Major Changes” from the published draft and updates.
5. Both a clean and a compare version of the Risk Evaluation are included (only text changes are marked, not changes to tables as it would not work completely). (Note: The clean version of TCE Risk Evaluation is attached)

This link should work for all the ORD reviewers. Please contact me if you cannot access the folders or otherwise encounter any issues with accessing the documents.

Please submit the comments to me by COB Friday, Oct 9th and I will transmit the comments to OSAPE subsequently.

Thank you again.

Best,
-Santhini
